EDI Gateway

by optimizers

The standard EDI module for Exact Globe

EDI Gateway for Exact Globe

Easy in use

With the EDI Gateway for Exact Globe Optimizers has responded to the demand of Exact customers: a flexible Electronic Data Interchange (EDI) solution that is prepared for the future. With various customers we have proved with the EDI Gateway that the module can be implemented quickly at limited costs. The module is easy to connect with various platforms and globally recognized standards.

The strength of the EDI Gateway is that it seamlessly can be connected to the following processes in Exact Globe:

- Order processing to invoicing (Order2Cash)
- External Logistics Service Providers (3PL)
- Intercompany Logistics (ICL)

Saving time and costs

Real-time insights into received and sent messages. Orders are automatically imported and exported.

Less mistakes

Receive orders from customers automatically, no manual errors. Each order message automatically generates an order in Exact Globe.

Flexible in use

Link your logistics service provider to Exact Globe and easily create messages when trading partners set new requirements.

Worldwide standard

Internationally accepted and applied by many organizations.
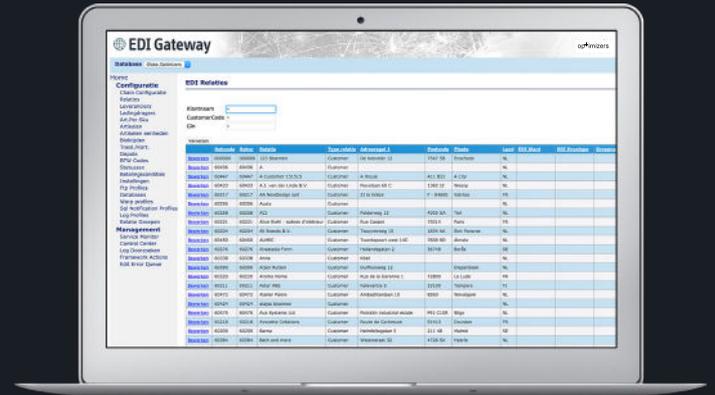

Cooperation Agreement

Exact has concluded a cooperation agreement with certified and development partner Optimizers. It states that the EDI Gateway is available worldwide via Exact.

Exact EDI specialists

The EDI Gateway is installed at more than 150 companies. Optimizers has a team of specialists that only deals with the EDI Gateway and Exact Globe. The EDI Gateway has users from the United States to Australia. Our EDI team is the point of contact for Exact Globe users for all questions concerning the link with the various EDI systems that are applied worldwide.

Support for e-commerce companies

E-Commerce companies expect real-time feedback with regard to orders that are placed. Consideration must be given to delivery times and stock quantities. The EDI Gateway supports the order required by today's e-commerce companies.

EDI Provider

To send EDI messages, you need an EDI provider in addition to the EDI Gateway. An EDI provider receives, translates and sends the EDI messages between you and your trading partner. The EDI Gateway always works in collaboration with an EDI provider.

3PL connection
Connect your logistics service provider

The EDI Gateway is able to connect your external logistics service provider in addition to standard EDI communication. By taking this process into account during automation, you will be able to automate the digital communication with your logistics service provider.

This means that your pick orders can be sent to your external logistics service provider without any additional actions and the response can be received and processed. Goods transactions can be validated between the production site and the logistics service provider.

Communication can take place in two ways: via the usual EDI channels and corresponding message types or via FTP communication. In both cases, a seamless connection is made to the process that has been set up in Exact Globe.
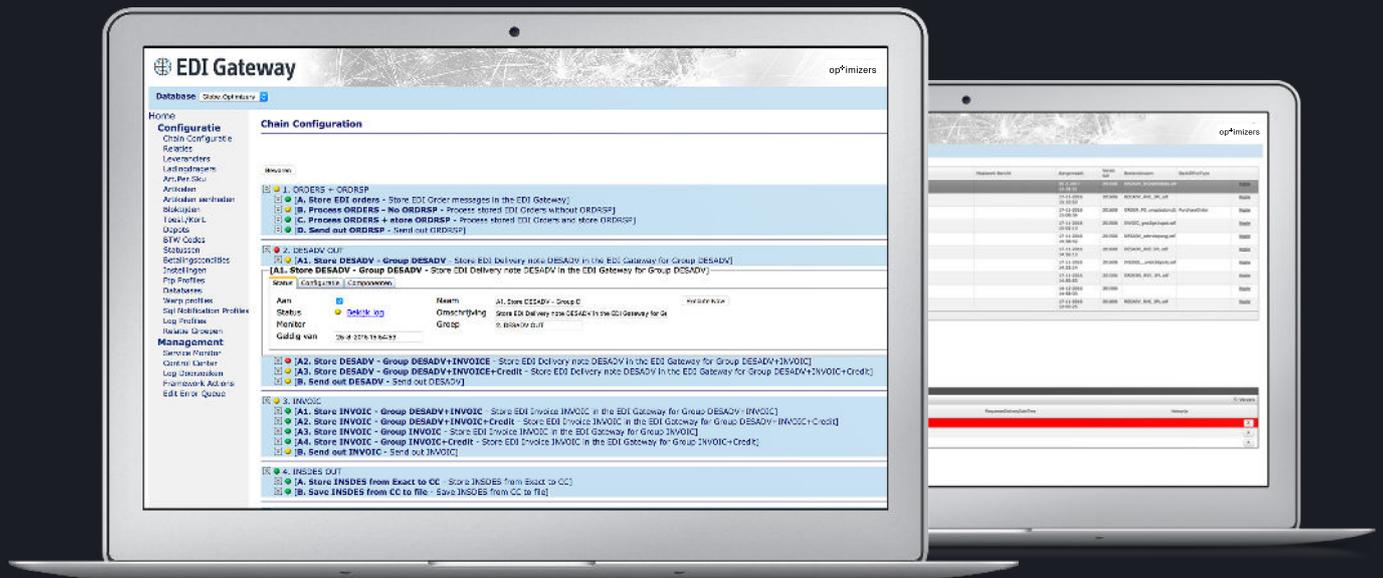

Exact Business Software
De EDI Gateway is Exact certified

Optimizers has developed a standard EDI module for the Exact Globe customer that is flexible and quick to implement. The Exact EDI gateway works with the Software Development Kit (SDK) from Exact Software and has been certified by an extensive audit.

Certified **Exact** Add-on

SDK certification by Exact Software indicates that the software module has been developed in accordance with the Exact Software standards and is using the Exact SDK correctly. As a result, transactions in the Globe database are saved in a manner authorized by Exact.

EDI Gateway supports, among other things, the following message types

Outgoing

INSDES	(Pick order 3PL)
